## ABSTRACT:

PURPOSE: To produce a composition, having improved moldability and capable of providing molded articles with good external appearance, excellent impact resistance, etc., by thoroughly melt kneading a thermoplastic polyester resin with a polar group-containing polyolefin, adding a metallic salt of an organic acid and melt kneading the resultant blend.

CONSTITUTION: (A) 100pts.wt. thermoplastic polyester, preferably polyethylene terephthalate, etc., is thoroughly melt kneaded with (B) 1&sim;100pts.wt., preferably 2&sim;80pts.wt. polar group-containing polyolefin, preferably maleic anhydride- modified ethylene-butene copolymer (with 0.01&sim;20wt% maleic anhydride content), ethylene-glycidyl methacrylate copolymer, etc., and (C) 0.01&sim;20pts.wt., preferably 0.1&sim;10pts.wt. metallic salt of an organic acid, preferably sodium salt of ethylene- methacrylic acid copolymer, etc., as a nucleating agent and, if necessary, a plasticizer, e.g. diethylene glycol dibenzoate, etc., are added. The resultant blend is then melt kneaded.
